

Micro dispensing in perfection!

Through the development of the new eco-PEN 700 3D from ViscoTec the preeflow[®] family gets a new big brother. The absolutely new geometry between rotor and stator generates a three times bigger output without any velocity loss in dispensing. The new eco-PEN 700 3D reaches a volumeflow up to 60 ml/min, therefore the eco-PEN's cover the whole array of micro dispensing starting from 1 µl. Of course the well known and appreciate features like the repeatability > 99 % and the reproducible accuracy ± 1 % will remain. The brand preeflow[®] stands for easy, exact and accurate dispensing.
